# Fraction Learning Trajectories in Content Courses for Prospective K-8 Teachers 

Jennifer M. Tobias
Ziv Feldman
Rachael M. Welder
Dana Olanoff

AMTE Annual Meeting
February 10, 2017

## Session Overview

- Provide a description of learning trajectories in mathematics education research and the CCSS-M
- Discuss our fraction comparison task and results from a study focusing on fraction comparison
- Examine PSTs' work on fraction comparison to propose a learning trajectory
- Provide implications for content courses and research in teacher education

## Learning Trajectories in Education

- Hypothetical Learning Trajectory (Simon, 1995).
- Common Core State Standards (CCSSO 2010)
- Fraction Learning Trajectories for PSTs
- Tobias $(2009,2013)$
- Tobias (2013) found that PSTs' fraction understanding may not develop as linearly as one might expect.
- Wilson, Mojica, \& Confrey (2013)

## Fraction Learning Trajectory for PSTs (Tobias, 2009)

| Phase Topic |  |
| :--- | :--- |
| One | Partitioning <br> Unitizing |
| Two | Compivalence <br> Ordering |
| Three | Addition <br> Subtraction <br> Multiplication <br> Four |

## CCSS-M: Fraction Comparison

Third Grade

- Compare two fractions with the same numerator or same denominator by reasoning about their size

## Fourth Grade

- Compare two fractions with different numerators and different denominators, e.g. by creating common denominators or numerators, or by comparing to a benchmark fraction such as $1 / 2$.

## Fraction Comparison Task

## 1. Comparing Fractions

2. Observe a Child Compare Fractions
3. Analyze a Children's Task
4. Posing Problems to Elicit Specific Strategies
5. Ordering Fractions

## Learning Goals

1. PSTs will develop the following reasoning strategies to compare and order:

- Same Size Pieces
- Same Number of Pieces
- Benchmark Comparison
- Greater Number of Larger Pieces

2. PSTs will:

- Have a general sense of the size of a fraction
- Identify which comparison strategies would be appropriate for a given situation

## Launch

- Make a list of everything you know about the number 7/8.
-Keeping the denominator the same, find 3 fractions that are greater than $7 / 8$, and find 3 fractions that are less than $7 / 8$.
- Keeping the numerator the same, find 3 fractions that are greater than $7 / 8$, and find 3 fractions that are less than $7 / 8$.

## Launch Discussions

-What the denominator represents (size of each piece)
-What the numerator represents (number of pieces you have)
-How much larger/smaller $7 / 8$ is from $1 / 2$ and 1
-Unitizing ( $7 / 8=$ seven $1 / 8$ pieces)

## Fraction Comparison Task

| Problem | Fractions to Compare | Intended Strategy |
| :---: | :---: | :---: |
| 1 | $1 / 2$ vs. $\underline{17 / 31}$ | Benchmark Value Equivalent to $1 / 2$ <br> Equivalent Fractions - Same Sized Pieces <br> Equivalent Fractions - Same Number of Pieces |
| 2 | $\underline{2 / 17}$ vs. $2 / 19$ | Same Number of Pieces |
| 3 | $4 / 7$ vs. $\underline{9 / 14}$ | Equivalent Fractions - Same Sized Pieces |
| 4 | $3 / 7$ vs. $\underline{6 / 11}$ | Benchmark Value Between [1/2] |
| 5 | $8 / 9$ vs. $\underline{12 / 13}$ | Benchmark Value Distance [1] |
| 6 | $13 / 15$ vs. $\underline{17 / 19}$ | Benchmark Value Distance [1] |

| Problem | Fractions to Compare | Intended Strategy |
| :---: | :---: | :---: |
| 8 | 7/10 vs. $8 / 9$ | Greater Number of Larger Pieces |
| 9 | 1/4 vs. $\underline{\text { 25/99 }}$ | Benchmark Equivalent to $1 / 4$ Equivalent Fractions - Same Number of Pieces |
| 10 | $\underline{24 / 7}$ vs. $34 / 15$ | Benchmark Value Between [3] |
| 11 | 2/7 vs. $3 / 8$ | Benchmark Value Between [1/3] Benchmark Value Distance [1] |
| 12 | $\underline{25 / 12}$ vs. $31 / 15$ | Benchmark Value Distance [2] |
| 13 | 11/20 vs. 19/36 | Benchmark Value Distance [1/2] |
| 14 | 2/9 vs. $3 / 8$ | Benchmark Value Distance [1/3] Greater Number of Larger Pieces |
| 15 | 18/25 vs. 16/27 | Greater Number of Larger Pieces |

## Discussion

1. What do you notice about PSTs' thinking? -What do they appear to understand/not understand?
2. How successful were the PSTs with using an intended strategy to solve the problem?
3. Based on the results, develop a learning trajectory for fraction comparison.

## Results

| Problem | \# of PSTs who <br> answered the <br> question <br> $(\mathrm{n}=63)$ | \% of responses <br> received with <br> correct answers | \% of responses received <br> using the intended <br> strategy |
| :---: | :---: | :---: | :---: |
| $1 / 2$ vs. $17 / 31$ | 61 | $95.2 \%$ | $73 \%$ |
| $2 / 17$ vs. $2 / 19$ | 62 | $98.4 \%$ | $92.1 \%$ |
| $4 / 7$ vs. $9 / 14$ | 61 | $96.8 \%$ | $82.5 \%$ |
| $3 / 7$ vs. $6 / 11$ | 63 | $95.2 \%$ | $68.3 \%$ |
| $8 / 9$ vs. $12 / 13$ | 58 | $85.7 \%$ | $44.4 \%$ |
| $13 / 15$ vs. $17 / 19$ | 55 | $76.2 \%$ | $55.5 \%$ |
| $15 / 17$ vs. $19 / 18$ | 59 | $93.7 \%$ | $79.4 \%$ |

| Problem | \# of PSTs who <br> answered the <br> question | \% of responses <br> received with <br> correct answers | \% of responses received <br> using the intended <br> strategy |
| :---: | :---: | :---: | :---: |
| $7 / 10$ vs. $8 / 9$ | 61 | $96.7 \%$ | $14.8 \%$ |
| $1 / 4$ vs. $25 / 99$ | 60 | $84.1 \%$ | $76.2 \%$ |
| $24 / 7$ vs. $34 / 15$ | 60 | $95.2 \%$ | $82.5 \%$ |
| $2 / 7$ vs. $3 / 8$ | 57 | $81 \%$ | $6.3 \%$ |
| $25 / 12$ vs. $31 / 15$ | 55 | $84.1 \%$ | $66.7 \%$ |
| $11 / 20$ vs. $19 / 36$ | 52 | $81 \%$ | $39.7 \%$ |
| $2 / 9$ vs. $3 / 8$ | 52 | $96.2 \%$ | $21.2 \%$ |
| $18 / 25$ vs. $16 / 27$ | 46 | $95.7 \%$ | $41.3 \%$ |

## Trajectory for Fraction Comparison

| Level | Topic | Description | Average \% |
| :--- | :--- | :--- | :---: |
| $\mathbf{1}$ | Common Numerator <br> Common Denominator | Same Number of Pieces <br> Same Size Pieces | $92.1 \%$ |
| 2 | Equivalent Fractions <br> - Same Size Pieces <br> Same Number of <br> Pieces | Use equivalent fractions to <br> find fractions with the same <br> size/number of pieces | $74.8 \%$ |
| $\mathbf{l}$ Benchmark Value | One of the given fractions is <br> equivalent to the benchmark <br> fraction |  |  |
| $\mathbf{E q u i v a l e n t ~}$ | Benchmark Value <br> Between | Benchmark is between the <br> two given fractions | $59.1 \%$ |
| $\mathbf{4}$ | Benchmark Value <br> Distance | Benchmark is above or below <br> both fractions | $39 \%$ |
| 5 | Greater Number of <br> Larger Pieces | The fraction with more larger <br> pieces is greater | $25.8 \%$ |

## Implications

Research

- More research is needed focusing on PSTs' fraction comparison strategies over time.

Teacher Education
-Putting comparison problems in order (according to a learning trajectory) may aid in their understanding of the topic more (i.e. have PSTs solve comparison problems with equivalent fractions before greater number of larger pieces).

## Thank You For Coming

For the comparing fractions task and facilitation notes for this task, please see our website: www.mathtaskmasters.com
